WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

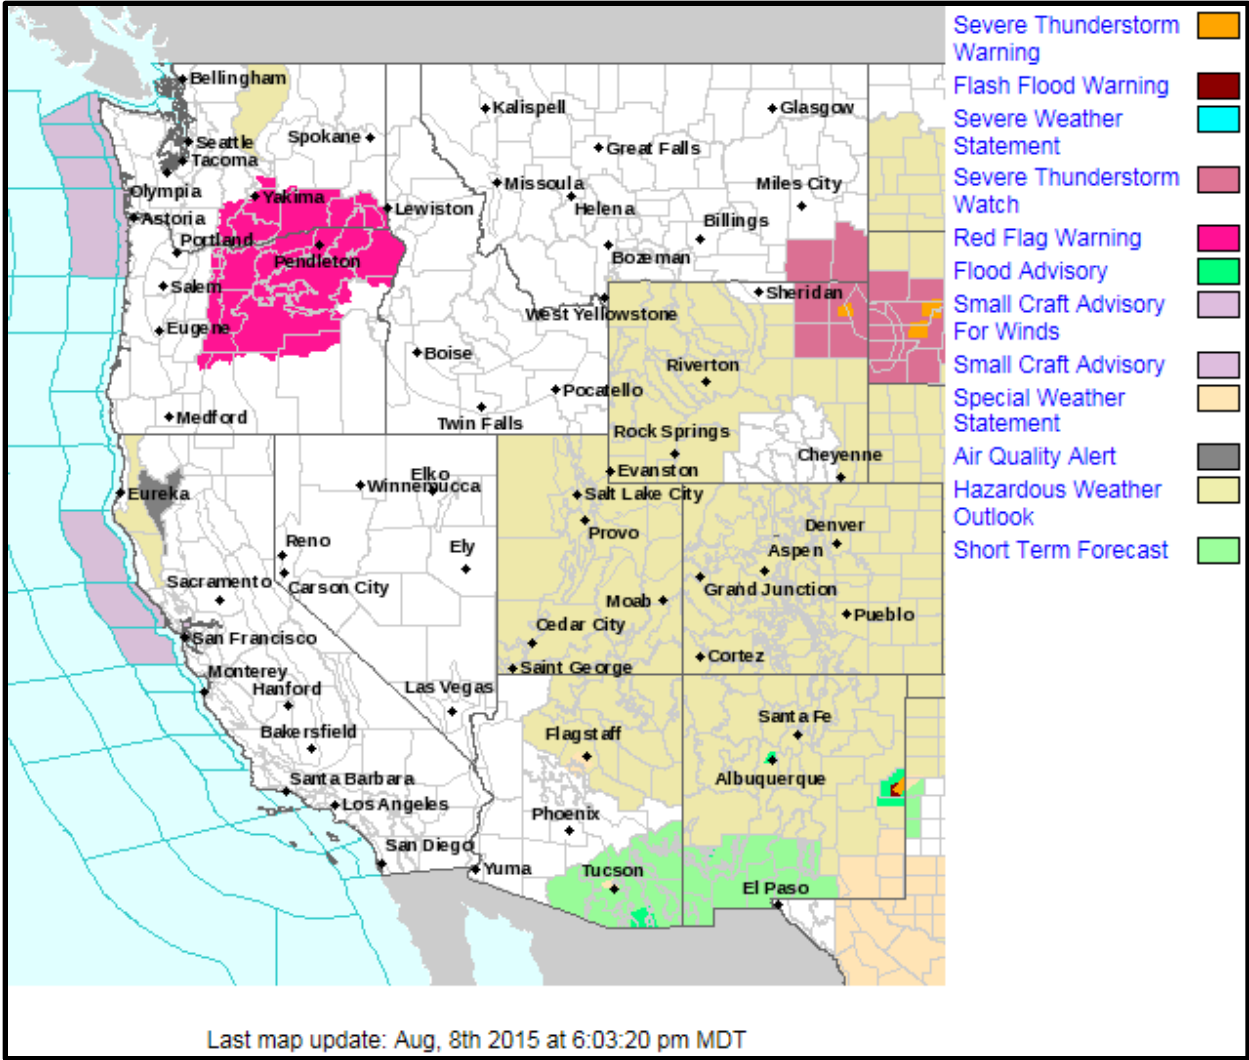

A low pressure trough will begin to drop into the Northern Operational Area from the Eastern Gulf of Alaska today. Isolated thunderstorms are possible late today in far northern and eastern areas, but the chances are quite low. The main fire weather issue for this incoming trough will be increasing southwest to west winds today, which may gust to 17-22 mph late this afternoon over exposed areas. By Sunday these winds will be out of the south to southwest with gusts over higher terrain reaching 20-28 mph. These winds will further increase Monday and Tuesday to 25-32 mph out of the southeast to southwest; with the Weed, California area being a particular concern, as the trough deepens and forms a cutoff low just offshore. There is a remote chance of isolated showers or thunderstorms each afternoon across the far northern and eastern ends of the Northern Operational Region through Wednesday. Late on Thursday the low will move northeast into southwest Oregon, clipping the far northwest corner of California. There is a chance of showers or thunderstorms north of a line from Cape Mendocino to McCloud to Goose Lake late Thursday. Friday will be warmer and drier with winds becoming light out of the west.

SOUTHERN CALIFORNIA

There will be only minor changes in the weather through early next week as a weak Pacific trough sits over the West Coast. Maximum temperatures will be in the 70s to low 80s over the mountains with mid-80s to mid-90s in the valleys. Minimum relative humidity will be mainly between 12% and 25% above and inland from the marine layer. The marine layer will be between 2,000 and 3,000 feet deep, with morning low clouds and fog making it well into the coastal valleys. There may be an isolated afternoon thunderstorm over the Eastern Sierra this weekend as there is still some leftover moisture from the low pressure area that moved across Central California Friday. High pressure over Texas will expand westward bringing a significant warming trend to the region Wednesday through the end of next week. Temperatures will reach 100 degrees over the warmer valley locations by late next week. South flow aloft may bring enough monsoonal moisture for isolated afternoon showers and thunderstorms over the Sierra and over the mountains and deserts of Southern California east of the I-15 corridor Wednesday through the end of next week. No significant winds are anticipated across the region besides strong and erratic winds in and near any thunderstorms developing through the end of next week.
